Interactive / complex / 2

IC 1	query	Interactive / complex / 2					
IC 2	title	Recent messages by your friends					
IC 3 IC 4 IC 5 IC 6	pattern	person: Person id = \$personId kno	id firstName lastName	Person	← hasCreator	Message - creationDate < \$maxDate id content / imageFile	
IC 7						creationDate]
IC 8		Given a start Person with ID \$personId, find the most recent Messages from all of that Person's friends (friend nodes). Only consider Messages created before the given \$maxDate (excluding that day).					
IC 9	description						
IC 10							
IC 11	params	1 \$personId ID					
IC 12		2 \$maxDate Date					
IC 13		2 SillaxDate Date					
IC 14v1	result	1 friend.id	ID	R			
IC 14v2			String	R			
			String	R			
			ID	R			
		message.content or		IX.			
			Text	R			
		photos)					
		6 message.creationDate	DateTime	R			
	sort	1 message.creationDate]					
		1 message.creationDate ↓ 2 message.id ↑					
	limit 20 CPs 1.1, 2.2, 2.3, 3.2, 8.5						
	relevance	This is a navigational query looking for paths of length two, starting from a given Person, going to their friends and from them, moving to their published Posts and Comments. This query exercices both the optimizer and how data is stored. It tests the ability to create execution plans taking advantage of the orderings induced by some operators to avoid performing expensive sorts. This query requires selecting Posts and Comments based on their creation date, which might be correlated with their identifier and therefore, having intermediate results with interesting orders. Also, messages could be stored in an order correlated with their creation date to improve data access locality. Finally, as many of the attributes required in the projection are not needed for the execution of the query, it is expected that the query optimizer will move the projection to the end.
